3. Cordona rod linkage

Enjoy your gear shifts!

See next page for activation etc.

1. Follow installation video for general installation procedure for OEM Quick Shifter
Check out this installation video of OEM shifter for general installation
<https://www.youtube.com/watch?v=v7QgJMzYlpg>

Alternative activation procedure:

Some bikes do not enable the quickshifter function with above method. In this case perform the following procedure.

This is because the Cordona SG switch close the quickshifter loop in 150ms and the bike ECU needs 15 sec to enable the function.

- Short out the sensor plug on the bike side with a clip or similar
 - From neutral, pull up on the lever to select 2nd gear
 - Then turn on the ignition switch while holding the lever in the up position for 15 sec.
 - Release the lever and the QS should appear on the dash
-
2. Preassembly the new Cordona sensor linkage according to Picture 3
 3. Measure your height on the gear lever before remove from bike
 4. Connect the Cordona R7 Cable to bike connectors see photo 1-2
 5. Enjoy your gear shifts!
